Security Management Alerts

Getting The Right Information — To The Right Person At The Right Time!

One of the keys to running your business properly is timely information. Is the building being armed and disarmed at the appropriate times? Are employees entering the business at odd hours?

With our Security Management tool, **Direct Link**, we can provide you with timely **Reports** that will help you run your business.

How do you ensure your business is opened on time each day? How do you ensure that the business remains open as long as it is supposed to? With **Direct Link**, you can be notified by email if your alarm system is not disarmed on time or if it is armed early, rather than at the scheduled time.

Are you concerned about staff re-entering your business after hours or staff forgetting to turn the alarm on at night? With our **Direct Link Management Alerts** you will receive email notifications of Unscheduled Openings by user number as they occur and Late to Close notifications if your business remains open past their scheduled times.

Are you concerned about internal theft? Are zones of your security system being bypassed before arming — leaving areas of your business vulnerable? With **Direct Link** you can be notified anytime zones are bypassed.

Direct Link's flexibility also ensures that the right people in your company receive the right information at the right time. Direct link can notify your Managers of irregular openings, closings and any unscheduled activity.
